

## Log Deck

Ryetec Log Loaders are designed to link into your processor hydraulic system and run in tandem with your infeed conveyor. Log decks come as 1.2 metres or 1.4 metres wide and with the option of 3, 4 or 5 metres in length. Our Log Decks are designed to save time by loading a lot of timber in one go rather than loading single logs at a time.

### Log Deck Options

- **Cross Conveyor**—runs alongside your infeed conveyor on your processor
- **Ratchet drive**—6 ratchet points that rotate 90 degrees to slide under the next log and drag them forward. Powered by a central hydraulic ram under the table.
- **Chain Drive**—3 Chains across the table, the chain drive has the option to run forwards and backwards, if you have a few logs on and two fall forward, you have the option to reverse it back onto the pile.
